# Fast-Casual Mexican Restaurant Chain

## Serving up safer kitchens

Illinois, USA

With a mission to bring bold flavors and fresh ingredients to more communities, a growing fast-casual Mexican restaurant chain continues to expand its national footprint with a new location in Illinois. Each restaurant is designed to support fast-paced kitchen operations while delivering a welcoming, safe experience for both staff and guests.

In commercial kitchens and foodservice environments, safety and cleanliness are non-negotiable. High foot traffic, frequent spillages, and demanding cleaning routines create conditions where flooring performance is critical.

For the Illinois location, the project team partnered closely with Altro representatives to select finishes that would stand up to daily wear while protecting everyone in space, from kitchen staff working long shifts to families enjoying a meal.

Altro Stronghold 30 proved to be the ideal flooring solution for this demanding environment. Designed specifically for areas where water, grease, and food contaminants are common, it delivers reliable performance without compromise. It maintains its industry-leading 1 in a million-slip resistance, even when exposed to challenging substances such as vegetable oil, greasy water, and flour underfoot, helping reduce the risk of slips and falls in one of the busiest areas of the restaurant.

To further support hygiene and simplify maintenance, clamping drains were incorporated into the flooring installation. When combined with Altro Stronghold 30, these drains help create a secure, watertight finish that allows for more efficient washdowns and faster cleanup. This design detail supports daily cleaning protocols while helping maintain a safer, more hygienic kitchen environment without the risk of water ingress to subfloor.

Beyond safety, Altro Stronghold 30 also supports staff comfort and productivity. Its 3mm thickness provides enhanced underfoot comfort, helping to reduce fatigue for employees who spend hours on their feet. The added thickness also contributes to noise reduction, creating a more comfortable environment in the kitchen during peak service times.

Backed by more than 60 years of experience delivering integrated floor and wall solutions for commercial kitchens, Altro brings unmatched expertise to the foodservice sector, allowing operators to stay focused on what they do best, delivering fresh, high-quality food every day.
