Installation Part A:

While preparing the first panel, bevel the butting edge. Attach the one part joint so that it is tight against the panel edge. Adhere and place on wall. Use three horizontal rows of 1" rubber double faced tape. See datasheet 14.

Installation Part B:

1. Lay the next panel (prepared the same way) onto the exposed back leg of the joint strip.
2. Tap the G831 toward the second panel so the face overlaps both panels equally.
