Beaumont Royal Oak Compounding

A master crafted solution for Michigan pharmacy

Altro Suprema, Altro Whiterock

Although Master Craft Floors, Inc. was relieved to find their moisture mitigation system in full working order, Beaumont Royal Oak Central Pharmacy compounding laboratory still experienced moisture issues.

Careful investigation determined the problem: the Royal Oaks, MI facility was suffering from a faulty condensation line in one of their coolers, allowing moisture to seep beneath the flooring.

This eroded the bond between the floor prep and adhesive, causing the material to fail. Excess water can be a contaminant, so the entire space had to be shut down until the issue was resolved.

Because of its hygienic nature, Master Craft Floors knew Altro sheet vinyl flooring was the perfect fit.

Altro Suprema, a 2mm safety flooring range, features Altro's premier cleaning technology, Altro Easyclean Maxis PUR, and its excellent slip resistance and static load limit values make it ideal for a variety of areas, be it back or front of house.

However, with scratches and chipped paint abound, the wall became another issue - such gouges are a hotbed for contamination.

Altro Whiterock hygienic wall cladding was matched to the lab's paint color, and it was heat-welded and flash-coved to the Altro Suprema to create a safe and contaminant-free environment.

This hygienic wall cladding is designed for environments with rigorous health and safety standards. When combined with Altro flooring, such as what Master Craft Floors did with Altro Suprema, it creates a hygienic, durable, easy-to-clean and, fortunately for Royal Oak, watertight solution.

Submitted to the Starnet Design Awards at the 2016 Starnet Spring Meeting, the creative solution to this problem earned Master Craft Floors the Bronze in Unique Installation.
