Nestlé, Spain

Nestlé Spain achieves high design with Altro safety flooring

Altro Walkway™ 20, Altro Wood Safety™, Altro Stronghold™ 30

1,000 people work daily at the headquarters of Nestlé in Barcelona, Spain, and the company hosts over 50,000 visitors annually. This high level of traffic also spills over into the catering and cafeteria areas. These areas have been recently modernised with a variety of Altro safety flooring to provide better service to staff and visitors.

An essential part of the refurbishment was the choice of flooring. There was a need for a high design using different colours and shapes, but it also had to adhere to safety and hygiene regulations for dining and catering areas. The project also needed to be completed quickly to minimise disruption to the normal activity of the dining rooms. With 250,000 meals served annually at the offices of Nestlé, Eurest Catalunya, a company belonging to Compass Group, was able to install Altro safety flooring without interrupting the normal business day.

In total 1,200m² of three different Altro safety flooring were installed. In the self service and dining room areas, approximately 1,000m² Altro Walkway™ 20 in two different colours and Altro Wood Safety™ were used. Altro Stronghold 30 was used in the kitchen. For the cafe on the ground floor, about 200 m² of two different shades of Altro Walkway 20 were used.

Altro was chosen for its slip resistance, versatility and ease of installation and the ability to create a high spec design without compromising on safety.

Jordi Massip, restoration supervisor at Eurest said, “The floor was installed in stages and the dining room was not closed during the installation. The flooring was easy to install, and in two days the area was open and fully operational.”
