Altro Whiterock™ wall system installed at multi-site regional health center

St. Joseph’s Healthcare in Hamilton, Ontario is a four campus organization providing tertiary, secondary, and ambulatory health care services. Along with a staff of more than 4,000 and over 650 beds, St. Joseph’s healthcare is home to prestigious integrated health services and renowned research centers.

St. Joseph’s Healthcare has grown into a multi-site, regional health center, bringing Altro Whiterock along with its expansion. Altro Whiterock White was installed in this facility eight years ago and has upheld the strictest hygienic standards, granting the product continued use throughout the facilities.

With six healthcare facilities in the St. Joseph Health organization, a number of these hospitals have installed Altro Whiterock, with some facilities also using Altro flooring. Altro Whiterock was chosen for its durability, hygienic benefits, and overall look. The crisp, clean looking Whiterock White appealed to surgical areas and sterilization rooms, where products must adhere to the highest levels of hygiene.

John Gallager, Capital Project Manager for Saint Joseph’s Healthcare and the Senior Construction Manager attest to the longevity of the product, citing Altro Whiterock’s continued durability after eight years.

“I prefer the Altro Whiterock wall product for the hygienic areas of my facilities. It’s durable, hygienic, looks good, and easy to maintain. It’s a great product.”

Altro Whiterock’s commitment to meeting the hygienic demands of the hospital have furthered its use in the healthcare system.
