Utah Valley Medical Center

## Utah Valley Medical Center installs Altro Whiterock™ wall panels in key areas

Intermountain Utah Valley Regional Medical Center, located in West Provo Utah, is the only Level II Trauma Center south of Salt Lake County and serves trauma patients throughout the region. Utah Valley Regional Medical Center is committed to meeting the needs of their patients and providing the best care possible.

The hospital was interested in finding a wall product that would be more durable than epoxy paint. Altro Whiterock was selected for use in the American Fork Emergency expansion of the medical center as a test installation. The area chosen was in a corridor with an alcove where heavy equipment is parked often damaging the existing wall and corner guard.

After a six month evaluation with very positive results, the hospital was so pleased with the performance that they chose to move forward with several other installations in the facility. These installations include multiple slop sinks, adult ICU toilets, Alcove

wall cladding, Mammography in patient, NICU A Wall cladding, and NICU B Wall Cladding.

Altro Whiterock was chosen for its durability, excellent cleanability, and high impact resistance. Altro Whiterock is designed for building environments that are required to meet strict hygienic standards which was also a major factor for the hospital.

All departments are very happy with the results of the installation, both the function and aesthetics of Altro Whiterock. The hospital has plans underway for additional installations next year.

After a six month evaluation with very positive results, the hospital was so pleased with the performance that they chose to move forward with several other installations in the facility.
