Altro drain strainer covers

For ease in creating a modified drain with preexisting assemblies

For Altro flooring to be successfully installed in wet areas (i.e. kitchens, showers, bathrooms, etc.), all penetrations must be finished properly to prevent moisture from leaking under the floor. Ideally, this is done with a surface membrane clamping drain.

Previously, when a surface membrane clamping drain was not an option, the installer was required to perform an on-site modification of the preexisting drain in order to enable the flooring to be mechanically fastened in place. Our drain strainer covers are intended as an additional solution to modifying an existing non-surface membrane clamping drain to become a surface membrane clamping drain. This is achieved using our proprietary strainer cover manufactured to fit an existing non-surface membrane clamping drain. Our cover is specially designed to match the screw hole locations in the drain body of the non-clamping drain and its strainer.

For complete and detailed instructions on how to properly install Altro flooring in wet environments, please refer to the Altro flooring installation guide.

for Zurn ZW01/07-09-1 5" drain

for Watts FD-100 and Miffab F1000 5" drains
