

altro

Weldrod

Description

Weldrod is sold in 165 linear foot coils and is intended for use with Altro flooring and wall cladding. Weldrods are made from extruded PVC compound and are available in a range of colors designed to blend with Altro flooring and wall cladding. Altro recommends that all flooring seams are heat welded. Heat welding prevents the build-up of dirt and bacteria in the joint while also making the floor surface impermeable to water. Routine cleaning must be undertaken in order to maintain hygiene.

Weldrod can also be used with Altro Whiterock to join wall panels together. Consult the Altro Whiterock installation guide for further details.
